COMPREHENSIVE VEGETATION MANAGEMENT SERVICES

ASPLUNDH
ANYTIME. ANYWHERE.
If you manage rights-of-way, utility reliability or community trees, you have to be prepared to manage vegetation.

And chances are, Asplundh can do it more safely, efficiently and effectively at a lower cost. Our unique combination of experience, training, equipment and technology allows us to manage the vegetation — while you manage your business!
Since Asplundh developed the first fiberglass, non-conductive boom in 1958, we have led the way in safe, efficient aerial lift operations. Today, crews can be configured to suit any environment, from dense urban areas to remote, rugged terrain.

- Double-elevator lifts (up to 100-ft.) for greater working height and reach
- Smaller, self-propelled aerial lifts for backyard work
- Four-wheel-drive and tracked lifts for off-road applications
- Urban lifts — small enough that no outriggers are required — for increased productivity where space is restricted

SafeProduction It’s how our crews operate — day in and day out
WOOD DEBRIS MANAGEMENT

Asplundh has been leading the way in the reduction of wood waste since we prototyped our own chipper in 1949. Chippers have come a long way since. With many options in horsepower, fuel efficiency and lower emissions available, Asplundh offers a broad range of chippers to handle any type of wood debris management task.

- Standard drum and disc chippers
- Self-propelled backyard chippers
- Tracked whole tree chippers
- Tub grinders
SPECIALIZED EQUIPMENT

We feature highly-productive units ready to take on any terrain. Our fleet includes almost every vegetation management tool imaginable — rubber tired, tracked, hi-rail equipped for railroad use and aerial side-trimming via helicopter. We even have amphibious vehicles! Our on- and off-road vehicles put our skilled operators where you need them, when you need them.

- Aerial lift equipment big enough to side trim rights-of-way or small enough to get through a backyard gate
- Wide array of specialized mowing and cutting machines for major rights-of-way clearing and maintenance
- Chippers sized from smaller self-propelled units to high volume tub grinders
STORM EMERGENCY RESPONSE

When Nature is at its worst, Asplundh is at its best. We have proven time and time again, from coast to coast, that our emergency resources are unmatched when it comes to storm cleanup and restoration of service.

- An experienced team ready to respond before the storm even strikes
- Skilled crews who are prepared to do the job in a safe, efficient manner
- A vast array of standard and specialized equipment ready for deployment anywhere on the continent
- Safety supervision before, during and after the cleanup or restoration
- A fleet equipped with vehicle location systems (AVMS) to help track and dispatch crews to the highest priority work sites
- Logistical support for widespread or long restoration situations
In the late 1940s, Asplundh was a pioneer in herbicide applications for right-of-way vegetation management and remains a leader in integrated vegetation management today. Whether it’s high volume foliar or an ultra low volume backpack application, Asplundh offers:

- Advanced techniques to ensure the highest effectiveness at the lowest cost with respect to the environment
- Programs tailored to meet your exact requirements
- Trained crews and licensed applicators to ensure safety, efficiency and environmental stewardship
- Ongoing research programs to demonstrate the latest developments in vegetation control
- State-of-the-art equipment and herbicide products

Sometimes, there’s nothing quite like good, old-fashioned manpower — especially when it’s highly-trained, well-equipped and driven by a “Safety First” attitude. Asplundh employees are specialists at getting tough jobs done quickly and safely. They’re ready to climb and rig any trees that the big equipment can’t access.

It All Adds Up To... A company that has what it takes: talent, experience, equipment and the drive to be the best. Along rights-of-way, city streets, rail lines and pipelines, Asplundh’s vegetation management programs will help you deliver safer, more reliable service to your customers.
